</table>
LITHUANIA

Lithuanian governmental organization working on statistical indicators. The data is collected from different sources and registers but comes with many drawbacks. The organisation is seeking to have a full and almost real-time satellite image of Lithuania constructed from several real-time European satellite images. Potential cooperation types might be licence or technical cooperation agreement.

27 UNITED KINGDOM

A UK company has developed a novel biosensor for measuring blood propofol concentration in real-time incorporated into an analytic recovery platform that does not require blood withdrawal. Under technical cooperation agreements, partner organisations will contribute to and influence the further development of the novel technology to facilitate integration into existing devices.

28 BELGIUM

A Brussels-based international NGO is looking for partners with technological capabilities to apply their advocacy and assistance in field situations. These cooperation partners would enable the NGO and its partners to provide better field services to its members and beneficiaries, most of whom are from disadvantageous backgrounds. Partners are being sought for a services agreement or a commercial agreement with technical assistance.

30 ITALY

An Italian innovative startup patented some hybrid materials for the absorption of environmental pollutants and also for the biodegradation induction of hydrocarbon pollutants spilled into the soil. The company is looking for suppliers of air and/or fresh/salted water filters, to be filled with these innovative absorbent materials, and co-only the empty filter cartridges are needed. A commercial agreement with technical assistance will be proposed to suppliers of air and/or water filters.

32 FRANCE

A French company, producing systems on tables in laboratories, is looking for a measurement sensor, which records at least the oxygen level in water and temperatures and salinity and has an interface to collect data on demand. The company has several software solutions and a historical database to manage production. A technical cooperation programme is planned in which the French company could integrate the new sensor into the existing infrastructure.

33 LITHUANIA

Lithuanian governmental organisation is a public health care municipal office, established to implement public health functions assigned to municipalities by legal acts. They aim to find out the unique health needs of children and students in each educational institution, according to which they would perform public health care services more efficiently and organise the work of specialists more effectively. Potential cooperation types might be licence or technical cooperation agreement.

34 FRANCE

A French company is looking for a technical solution to make the turbines functioning. The company needs to get in contact with producers of different energy-related products, such as new turbines, and to establish long-term relationships. Partners are being sought for a services agreement or a commercial agreement with technical assistance.

35 ITALIAN small company, operating in the energy field, has patented a wind turbine that is at the stage of prototyping. In order to make the turbine functioning, the company needs to get in contact with producers of different energy-related products, such as new turbines, and to establish long-term relationships. Partners are being sought for a services agreement or a commercial agreement with technical assistance.

36 FRANCE

A Spanish biomedical research networking center has developed an innovative biosensor for the detection and/or diagnosis of DNA of Candida auris with a high level of sensitivity and selectivity. They are looking to establish licenses, research cooperation or technical cooperation agreements.

37 SPAIN

A Spanish biomedical research center has developed a new and useful toolkit for locating the epileptogenic zone (EZ) in patients with epilepsy. They are looking for cooperation in the method for producing it and its use in T-cell culture for immunotherapies (particularly in cancer). The biomedical center is looking to establish license, research cooperation, or joint venture agreements.

38 POLAND

A Polish scientist has developed a method of producing starch-based adsorbent. Thanks to its properties (i.e. lack of colour, colour or fragrance), the adsorbent can be used for the manufacturing of household chemicals and medicinal as well as in the production of paints. The production process is simple and utilises inexpensive materials, thus the invention can be easily and quickly introduced by a licence partner. Agreement on licence and commercial agreement with technical assistance are offered.

39 SINGAPORE

A Singapore SME offers a water-based, non-toxic coating that can be applied swiftly with little curing time. Proven to be able to remove contaminants and increase the shelf-life of food, this new paint technology can be applied to hand sanitizers, disinfection gates, surface disinfection/anti-microbial coatings, and as an anti-scaling coating in boilers. The SME seeks licensing/commercial partnerships with technical assistance with ARDA/ISAS of all sizes.

40 SLOVAKIA

A Slovakian research institute has developed a software and hardware unit for monitoring and evaluation of environmental parameters. The company has over 10 years of experience in the field and is looking for partners interested in developing the technology or increasing their events visibility.

41 FRANCE

A French company is looking for a technical solution to make the turbines functioning. The company needs to get in contact with producers of different energy-related products, such as new turbines, and to establish long-term relationships. Partners are being sought for a services agreement or a commercial agreement with technical assistance.

42 BELGIUM

A Brussels-based international NGO is looking for partners with technological capabilities to apply their advocacy and assistance in field situations. These cooperation partners would enable the NGO and its partners to provide better field services to its members and beneficiaries, most of whom are from disadvantageous backgrounds. Partners are being sought for a services agreement or a commercial agreement with technical assistance.

43 BELGIUM

A Brussels-based international NGO is looking for partners with technological capabilities to apply their advocacy and assistance in field situations. These cooperation partners would enable the NGO and its partners to provide better field services to its members and beneficiaries, most of whom are from disadvantageous backgrounds. Partners are being sought for a services agreement or a commercial agreement with technical assistance.

44 FRANCE

A French company is looking for a technical solution to make the turbines functioning. The company needs to get in contact with producers of different energy-related products, such as new turbines, and to establish long-term relationships. Partners are being sought for a services agreement or a commercial agreement with technical assistance.

In order to make the turbine functioning, the company needs to get in contact with producers of different energy-related products, such as new turbines, and to establish long-term relationships. Partners are being sought for a services agreement or a commercial agreement with technical assistance.
A German inventor developed an innovative motor water dispenser that actively stimulates drinking based on a new person control device that triggers the filling process. A water source offers a glass of water at the right moment to help meet daily water needs. The inventor offers license agreements.

A Polish company from the biotechnology sector has developed a method of dealing with bacterial pathogens using artificial intelligence. They are looking for commercial agreements with technical assistance.

The Slovenian public research organization has developed a new system for authenticity assessment of natural flavourings. The company offers its services in the form of technical cooperation agreements.

A German SME specializes in medical equipment and handle changing systems, which allows for the cleaning of all workplaces with only one system. It offers commercial agreements with technical assistance.

A Portuguese SME specializes in the automotive, transportation, aviation and medical technology sector. The company offers product development, prototype engineering, project management and simulations. The company supports its clients along the innovative process chain starting from an innovative idea towards the series production of the product. The company offers to license or sell its products.

A Portuguese inventor and a SME have developed a new technology to treat quartz and other raw materials that contain it, which can be used in various industries. They are looking for license agreements, research and/or technical cooperation agreements.

A Portuguese research group has developed a new technology to treat quartz and other raw materials that contain it, which can be used in various industries. They are looking for license agreements, research and/or technical cooperation agreements.

SPAIN

A Spanish start-up experts in the development of ground-breaking systems for wind energy generation is looking for partners to participate in European programmes. The technology offered is capable to produce clean energy from low speed winds and can be used connected to the grid or as a stand-alone system capable to generate energy in isolated environments.

ITALY

A Singapore research institute has developed a customizable LED light system plus software for indoor farming use. With urban farming on the rise, the technology allows the remote control of lighting and data analytic to improve productivity, reduce energy costs and optimize crop yield. The technology provider is keen to collaborate with SMEs with the relevant expertise/technologies via licensing agreements to commercialize this technology.

SINGAPORE

A Singapore institute of higher learning offers a novel hose system for air-conditioning that has a complete industry-specific protective layer. It is lightweight, easy to put on and off and comfortable to wear. Prototypes are available for demonstration.

FRA

A French company has developed a stand-alone production system of disinfectant using only salt and water. It can be used, as a service solution for maritime and inland water ship management companies. The software, already on the market, works on secure societies issues focusing on research and education regarding the role of social media in society. They are looking for commercial agreements with technical assistance.

EUROPE

A Spanish SME active in the field of telecommunications has developed a novel upgraded telecommunication system that can significantly increase the connectivity with commercial agreements with technical assistance.

FRANCE

A Spanish SME, active in the field of telecommunications, has developed an embedded software that provides the Access Points (APs) with cognitive capabilities, allowing them to learn from the environment, exchange information with neighboring APs and to cooperate between them to ensure an efficient use of wireless resources. The SME is interested in commercial agreements with technical assistance.

SINGAPORE

An Italian company with excellent R&D expertise on aeropropulsion systems has developed complete, variable and innovative propulsion systems suitable for micro and nanosatellites allowing the orbit raising and drag compensation. This technology fulfils the needs of many companies facing the problem of collecting huge amounts of data and text processing workflows. It is seeking partners for commercial and research cooperation agreements.
